

DELCO

TOP ANTENNA

THE DELCO TOP ANTENNA is the most efficient top antenna ever made for steel top cars.

A few of the many features are:

1. Eliminates wheel static.
2. Brings in more stations with less noise.
3. Ease of installation.
4. No drilling of holes in the top is necessary.
5. Graceful in appearance.
6. The Delco Top Antenna can be used with all auto radio sets and on all cars.
7. Allows sufficient overhead room for clearance when driving into a garage.

The Delco Top Antenna is easy to install—two rubber suction cups hold the antenna to the top of the car with special cement, which is not injurious to the finish. No drilling of the holes is necessary in the top. The Delco Top Antenna mounts through the cowl by drilling one $\frac{3}{8}$ " hole. A specially designed insulator and waterproof gasket is used.
